Project 2.1.6 AOI Circuit Design Rubric

PLTW PROJECT LEAD THE WAY

Total Points _____/110

Breadboard (20 points)

Topics	5 points	4 points	2 points	1 point
Component Wiring (x2)	Fewest number of components used to complete the task correctly. Wiring is neat and easy to follow. Labels on circuit added neatly to indicate inputs, outputs, and functionality.	Wiring is completed correctly but not efficiently done.	Wiring is difficult to follow and components not used efficiently.	Wiring is mostly incorrect.
Functionality (x2)	Circuit functions correctly, consistently, and the chosen components are appropriate.	Circuits functions most of the time, and the chosen components are appropriate.	Circuit sometimes functions.	Circuit rarely functions.

Simulation (15 points)

Topics	5 points	4 points	2 points	1 point
Neatness (x1)	Fewest number of components used to complete the task correctly. Simulation is neat and easy to follow. Text and highlights added appropriately to allow for ease of use and clarity of circuit.	Simulation is completed correctly but not efficiently done. Some text added to help user navigate simulation.	Simulation is difficult to follow and components not used efficiently.	Simulation is mostly incorrect.
Functionality (x2)	Circuit functions correctly, consistently, and the chosen components are appropriate.	Circuits functions most of the time, and the chosen components are appropriate.	Circuit sometimes functions.	Circuit rarely functions.

Project Management (15 points)

Topics	5 points	4 points	2 points	1 point
Gantt Chart	Gantt chart completed neatly with daily tasks to ensure project completion. Tasks updated frequently to best represent daily tasks done by team members.	Gantt chart completed neatly with tasks to ensure project completion. Tasks updated to best represent daily tasks done by team members.	Gantt chart completed with tasks to ensure project completion. Tasks are infrequently reviewed.	Gantt chart incomplete.
Teamwork (x2)	All team members work well with each other and settled differences in a positive manner. Down time used productively and never off-task.	All team members demonstrated good team working skills the majority of the time. Down time used productively, but off-task occasionally.	Most team members demonstrated good team working skills most of the time. Down time not used productively and off-task often.	Most team members off-task most of the time.

Electronic Documentation (65 points)

Topics	5 points	4 points	2 points	1 point
Professional Appearance	Includes all required sections; includes page numbers and appropriate section headings. Font and spacing choices are appropriate for each type of text and consistent throughout document.	Includes most required sections; includes page numbers and appropriate section headings. Font and spacing choices are appropriate.	Does not include all required sections; includes page numbers; section headings could have been better organized. Font and spacing choices not appropriate.	Missing many sections; does not have page numbers or section headings. Lack of care put into layout and organization.
Title Page & Table of Contents	Includes all components required for a complete title page and table of contents. Page numbers and sections are consistent and accurate.	Includes 80% or more of the necessary components for a complete title page and table of contents. Some page numbers or sections are inaccurate.	Includes 60% or more of the necessary components for a complete title page and table of contents. Many page numbers or sections inaccurate.	Title page and table of contents unorganized and inaccurate.
Design Brief & Concept	Is grammatically correct and includes a clear and concise description of the problem and design statement; all constraints and deliverables listed neatly. Problem statement clearly addresses an issue for target consumer.	Is grammatically correct; problem and design statement unclear; all constraints and deliverables listed. Problem statement addresses an issue for target consumer.	Has some grammar mistakes; problem and design statement unclear; missing some constraints and deliverables. Problem statement does not address an issue for target consumer.	Has many grammar mistakes; missing many important parts of the design brief
Design Definitions & Specifications	Input and output definitions described clearly and match design concept. Output specifications clearly described indicated rationale for output values.	Input and output definitions described and match design concept. Output specifications described.	Input and output definitions described and match design concept.	Input and output definitions described.
Truth Table(s)	Effectively demonstrates important considerations and clearly communicates the process that contributes to selecting a final solution.	Somewhat effectively demonstrates important considerations and the process that contributes to selecting a final solution.	Is missing elements that should have been considered for selecting a final solution.	Is missing elements that should have been considered for selecting a final solution, and poorly communicates the final solution selection process.
Logic Expression	Unsimplified logic expression is written neatly and correctly based on truth table. Thorough steps shown to simplify expression using Boolean laws. Simplified version is completed correctly and represent the most simplified implementation of circuit.	Unsimplified logic expression is written correctly based on truth table. Steps shown to simplify expression using Boolean laws. Simplified version is completed correctly and represent the most simplified implementation of circuit.	Unsimplified logic expression is written correctly based on truth table. Steps shown to simplify expression using Boolean laws. Simplified version is completed correctly.	Unsimplified logic expression is written and steps are shown to simplify expression using Boolean laws.
Final Solution Description (x2)	Paragraph description of final design clearly indicates performance and explains all components used in the circuit implementation. Cost analysis included with well-organized table of values and used to justify the cost of actual implementation. Description of real-life implementation is well-written and clear identifies ways to fully implement.	Paragraph description of final design indicates performance and explains all components used in the circuit implementation. Cost analysis included to justify the cost of actual implementation. Description of real-life implementation identifies ways to fully implement.	Paragraph description of final design indicates performance and explains components used in the circuit implementation. Cost analysis included.	Paragraph description of final design indicates performance and explains components used in the circuit implementation.
Final Breadboarded Circuit (x2)	Solution is accurately represented through high-quality photographs. **Multiple views** used to clearly highlight all physical aspects of the machine. Is properly detailed for effective communication, including **labels and descriptions.**	Solution is represented through photographs. Is properly detailed for effective communication, including labels and descriptions.	Photographs are included but lacks details for effective communication, such as labels and descriptions.	Photographs included do not present the concept well. Missing several details for effective communication, including labels and descriptions.
Final Simulation (x2)	Screen shot(s) of final simulation provided and clearly displayed. Simulation is well-organized with proper annotation for ease of use.	Screen shot(s) of final simulation provided. Simulation is organized with proper annotation.	Screen shot(s) of final simulation provided.	Screen shot(s) of final program provided, but missing some parts.
